

***THE THIRD DIMENSION...***

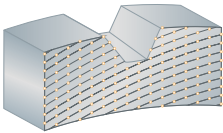

# TRIMEX<sup>3</sup>

## WALL SAW BLADES

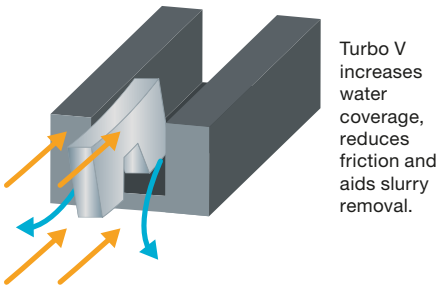

Trimex3™ Wall Saw Blades have brought the third dimension to floor sawing, with a unique positioned diamond system.

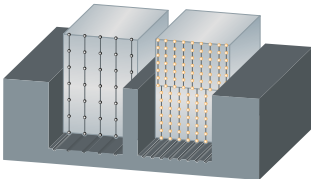

Diamond is positioned in alternating lines.

Diamond follows the direction of the cut.

Turbo V increases water coverage, reduces friction and aids slurry removal.

Cut pattern of standard diamond blade.

Cut pattern of Trimex3™ diamond blade.

### **SPEED**

Constant presence of diamond on the segment surface ensures a consistent, fast cut. Furthermore, the V shape increases water coverage, aids slurry removal, reduces friction, producing less drag on the segment.

### **LIFE**

Trimex3™ technology with alternating lines allows more diamond and maximises diamond potential.

### **CONSISTENCY**

The even spread of diamond, placed to follow the line of cut, with reduced gaps between the diamond allows the Trimex3™ to cut consistently and efficiently.

### **PERFORMANCE**

The Trimex3™ blade has increased steel cutting performance, due to the constant presence of sharp diamond at the cut surface. The alternating lines on the segments also enable a greater material removal per revolution ratio.
